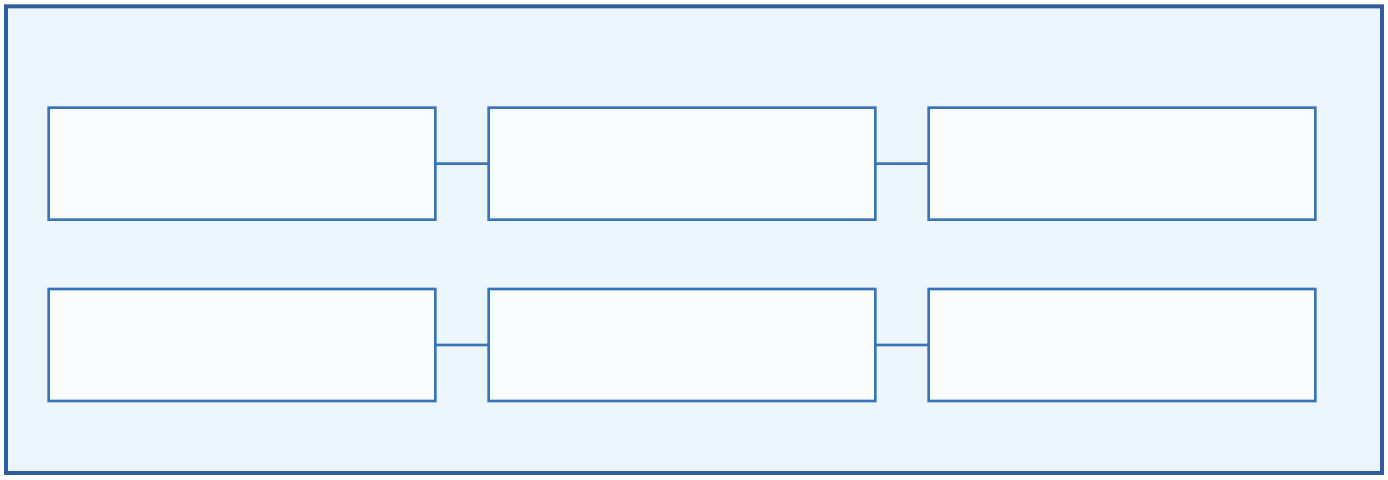
TECHNICAL EXHIBIT A: MULTI-REGION VPC & FAILOVER TOPOLOGY

DOC_TYPE=TECHNICAL_EXHIBIT | SECTION=ARCH-TOPOLOGY-01 | ELEMENT=diagram | AMENDMENT=0 | EFFECTIVE=2026-01-15 | AMENDS=

Architecture Specification ARCH-TOPOLOGY-01 (Multi-Region Cloud Network):


1. Ingress Layer: Global External Application Load Balancer protected by Cloud Armor WAF enforcing OWASP Top 10 preconfigured rules and adaptive DDoS protection.
2. Hybrid Connectivity: Redundant Cloud HA VPN tunnels (99.99% SLA) terminating on Cloud Router with dynamic BGP ASN 64512 (On-Premises ASN 65001) and MED failover.
3. Regional Compute: Primary Region us-central1 (GKE Autopilot + Cloud SQL HA) with cross-region replica and automated failover to Secondary Region us-east4.
4. Data & AI Plane: Private Service Connect (PSC) endpoints in both regions routing privately to BigQuery and Vertex AI without traversing the public internet.
