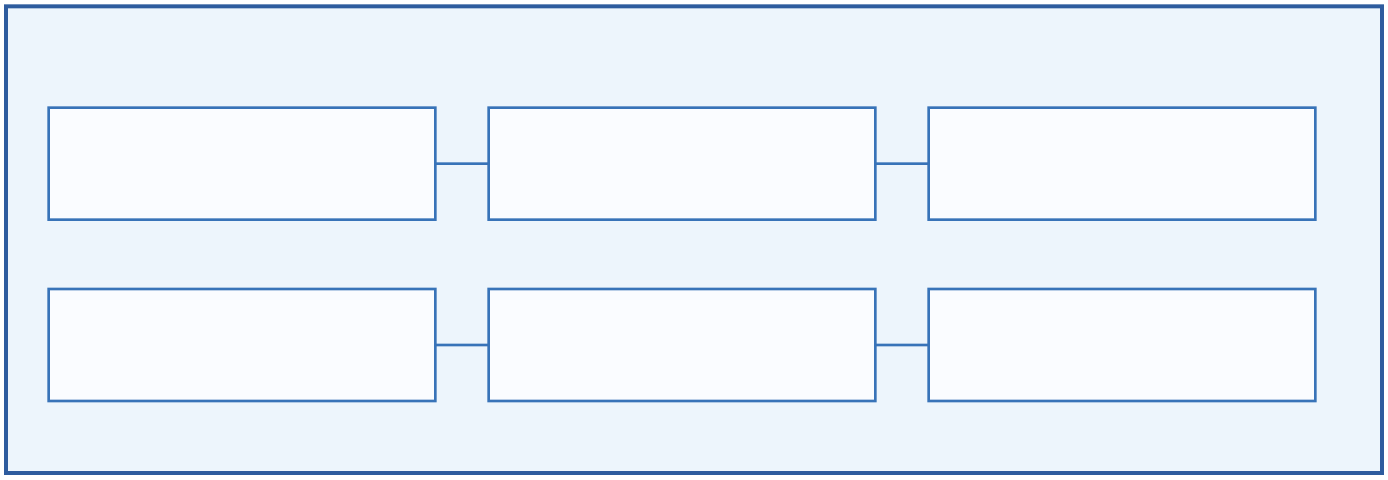
EXHIBIT A: NIST SP 800-207 ZERO TRUST CONTROL PLANE & PEP TOPOLOGY

DOC_TYPE=TECHNICAL_EXHIBIT | SECTION=ZTA-NIST-800-207 | ELEMENT=diagram | AMENDMENT=0 | EFFECTIVE=2026-02-10 | AMENDS=

Architecture Specification ZTA-NIST-800-207 (Zero Trust Enforcement Flow):


1. Control Plane: Policy Engine (PE) evaluates continuous device posture, BeyondCorp context-aware access levels, and Chronicle threat intelligence feeds, signaling the Policy Administrator (PA) to mint short-lived mTLS / OIDC session tokens.
2. Data Plane Policy Enforcement Point (PEP): Identity-Aware Proxy (IAP) and Envoy Service Mesh ingress gateways terminate all untrusted traffic and permit per-request access to protected enclave resources only upon PA verification.
3. Continuous Telemetry: Every PEP allow/deny decision streams to Google SecOps SIEM.
